

PhD position in the LHCb group of the University of Zurich

We are happy to be offering a new PhD position in the LHCb group of the University of Zurich (UZH). The successful applicant will work on Rare Decays analyses at LHCb, specifically on trying to better understand the cause of the so-called flavour anomalies; a pattern of deviations from SM expectations observed across a range of rare decay measurements. The LHCb group at Zurich currently consists of 5 senior researchers, 7 postdoctoral researchers and 7 PhD students and has a strong background in rare decays.

The position will be for four years and available from the 1st January onwards, with a starting date by 1st February strongly preferred. The salary will be 47-50K a year.

Applicants must have, or be about to obtain, a Master degree (or equivalent) in Physics.

In order to apply for this position please send an email to Prof. Nico Serra (nicola.serra@cern.ch) and Dr. Eluned Smith (eluned.anne.smith@cern.ch) attaching a CV, a motivation letter and the contact details of two references.
